Experience

Experience is the keystone to our business. Providing high-quality roof and floor trusses to builders since 1979. Our truss design technicians average over 10 years experience with Florida Forest Products designing roof and floor trusses for all types of construction. We continually educate and train our staff to keep pace with current building codes and practices in this dynamic marketplace.

Quality

Our truss technicians use industry-leading Alpine design software to create truss components and placement diagrams. Using the highest quality #2 or better southern yellow pine lumber from certified mills, cut it with computer controlled saws to ensure accurate angles and lengths. This plus in-house quality inspections and a third party quality assurance program guarantees a superior product.
